What is an Empathy Map?

An Empathy Map is a collaborative tool used to understand the users of a system by capturing their thoughts, feelings, challenges, needs and goals. It helps us step into the users' shoes to design solutions that are user-centered and solve the right problems.
For our project – Automated Network Request Management in ServiceNow, the empathy map helps us understand the end users and IT teams who interact with the system.

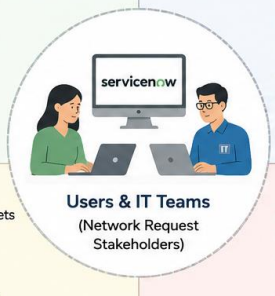

EMPATHY MAP – Automated Network Request Management in ServiceNow

1. I AM (Who are we empathizing with?)

- Employees who raise network requests (new connection, relocation, device, access)
- IT Service Desk / Network Team who process and fulfill requests
- Approvers / Managers who review and approve requests
- IT Administrators who manage the system and workflows

2. I'M TRYING TO (What are they trying to do?)

- Submit network requests quickly and easily
- Provide all required details correctly
- Track the status of my request in real-time
- Get approvals and fulfill requests without delays
- Ensure proper documentation and compliance
- Reduce manual work and repetitive tasks

Users & IT Teams
(Network Request Stakeholders)

3. BUT (What are their pain points?)

- Manual process involves emails, calls and spreadsheets
- Lack of visibility on request status
- Delays in approvals and task assignments
- Information missing or incorrect in requests
- No standardized process for different request types
- High workload and repetitive tasks for IT teams

4. BECAUSE (Why do these pain points exist?)

- No centralized platform for request submission
- Processes are manual and not automated
- Multiple tools and email communication
- Lack of integration between systems
- No real-time notifications and status updates
- Complex approval routing and handoffs

5. WHICH MAKES ME FEEL (What emotions do they experience?)

- **Frustrated** due to delays and manual follow-ups
- **Uncertain** about the status of the request
- **Inefficient** wasting time on repetitive tasks
- **Overwhelmed** by long approval and routing steps
- **Satisfied** when requests are quickly resolved
- **Confident** in a transparent and automated system

Key Insight: By understanding the users' needs, pain points and emotions, our solution focuses on automation, transparency and efficiency to deliver a seamless network request management experience in ServiceNow.
