**Project Design Phase-II**
**Solution Requirements (Functional & Non-functional)**

| | |
|---|---|
| Date | 28 June 2026 |
| Student Roll Number | 23A51A0529 |
| Project Name | Automated network request management |
| Maximum Marks | 4 Marks |

## Functional Requirements :

| Requirement ID | Functional Requirement | Description |
|---|---|---|
| FR-1 | Submit Network Request | Users can submit network requests through the Service Catalog. |
| FR-2 | Approval Workflow | Requests are automatically sent for approval before processing. |
| FR-3 | Record Management | The system creates and updates records in the Network Database. |
| FR-4 | Email Notifications | The system sends email notifications for request status changes. |
| FR-5 | Request Tracking | Users can view the current status of their submitted requests. |

## Non-Functional Requirements :

| Requirement ID | Non-Functional Requirement | Description |
|---|---|---|
| NFR-1 | Performance | The system should process requests quickly and efficiently. |
| NFR-2 | Security | Only authorized users can access and manage network requests. |

| | | |
|---|---|---|
| NFR-3 | Reliability | The system should operate without errors and ensure data accuracy. |
| NFR-4 | Usability | The application should provide a simple and user-friendly interface. |
| NFR-5 | Availability | The system should be available to users whenever required. |
